STORAGE COLLECTION

800 SERIES

SPECIFICATION GUIDE

MADE IN THE UK

Contents

Dimensions	
Standard shell height	452mm - 2150mm
Standard shell depth	457mm
Depth of 600mm is available as a tailored build.	

Indoor Advantage Gold - Furniture
This product is certified to Indoor Advantage Gold - Furniture, making it suitable for many building rating systems, including LEED v4, BREEAM, & WELL Building.

KI (UK) Ltd is the UK's leading specialist storage and filing company. Our experienced team provide tailored solutions drawing from our unrivalled portfolio of products. KI Inc is one of the world's largest private (employee owned) companies, producing contract furniture solutions for Business, Education, Healthcare, and Public Sector/Government Markets.

KI owns over 2.5 million sq.ft. of factory space worldwide, all of which is ISO 9001 certified. The KI 800 Series lateral filing and storage system is manufactured in the UK at a specialist 60,000 sq. ft. storage plant, incorporating state of the art manufacturing processes.

The 800 Series cabinets shown in this prefigured guide are available in 4 standard metric widths and 13 heights. **There are many further height and width options** - please contact your KI Sales Manager for details.

The System is designed on a 38mm height increment. This allows each cabinet to be tailored to meet the design brief and specific media storage requirements, without constraint from the product.

Please refer to www.kieurope.com for product finishes.

KI has implemented a Quality Management System for all its plants and related corporate functions. KI offers free delivery of orders over the value of £5000 during normal working hours by prior arrangement. For any enquires about tailored builds, please contact your KI Sales Manager.

> **Warranty**
> **All 800 Series products carry a 25 year Warranty**
> **(excludes keys and locks)**

Email: sales@kieurope.com

Counterbalance Weight.
A weight fixed into the inside back of the cabinet to minimise the possibility of the cabinet tipping over when a fully loaded drawer is opened.

Slides.
Sometimes called "runners"; the multi ball bearing support mechanism on which a drawer operates.

Lock Barrel.
The removable centre portion of the lock. With a special extractor key, lock barrels can be removed and replaced easily. All cabinets are fitted with a removable lock as standard at no extra charge.

"Double Bit" Lock.
A lock barrel with metal wafers or "bits" on opposing sides of the channel in which the key fits. The corresponding key has teeth on both sides of its blade. The double bit system provides greater security and a wider variety of keying options when compared to single bit locks.

Ganging.
Describes the bolting together of cabinets when installed side by side.

Levelling Feet.
Adjustable large footed bolts that screw into the four bottom corners to adjust the level and height of a cabinet.
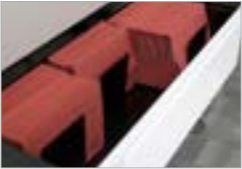

Receding Door.
Also called a "flipper door"; the door opens by lifting it at the bottom and sliding it into the cabinet. All KI receding doors have soft close mechanisms and fully recede into the cabinet.
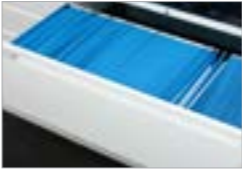

Tie Bar.
Used to complete the available filing height when no insert is required or where no insert is available to complete the remaining height.

Suspended Filing.
Describes filing pockets which hang on bars in pull-out drawers or file frames where access to the contents of the file is from the top.

Front-to-Back Filing.
Describes file pockets or filing boxes which run from the front to the back of the filing drawer. Files are parallel to the front of the drawer.

Side-to-Side Filing.
Describes file pockets or filing boxes which run from the left side to the right side of the filing drawer. Files are parallel to the sides of the cabinet.

Front Access Suspended Filing.
Also known as lateral front access filing. Describes filing pockets which hang on fixed bars or under fixed shelves where access to the contents of the file is from the front only.

End Tab Filing.
Shelf based storage folders, open on one side with colour coded tabs for identification. Documents are removed from the folder and replaced when required.

File Rails.
The heavy gauge steel rails that fit into a drawer to suspend side-to-side hanging folders.

File Bars.
Steel bars that fit across the file rails to suspend front-to-back hanging folders.

Pull-out File Frame.
A frame for suspended filing that is fitted onto slides. The whole frame with the files can be pulled out like a drawer. For use behind cupboard and receding doors.

Interlock/Anti Tilt Mechanism.
A safety mechanism installed in drawer cabinets. Prevents opening more than one drawer at a time. Minimises the possibility of the cabinet tipping.

SATRA & FIRA.
The leading testing, research and technology organisations for the office furniture industry

The entire range of 800 Series cabinets has been tested and passed the following performance tests;
BS4875-7:2006
BS4875-8:1998
BS EN ISO 14001:2004
BS EN ISO 14073-2:2004
BS EN ISO 14073-3:2004
BS EN ISO 14074:2004
Copies of FIRA and SATRA certificates available upon request.

Fully bled, angled handle detail. All closures specified from top to bottom of cabinet. Shell fitted with double bit core removable lock, supplied with 1 folding and 1 fixed key. For spare keys and alternative locking options refer to pages 18-19. Please specify all internals separately, see pages 14-15. 305mm drawers are ready to accept side-to-side suspension files. All cabinets 457mm deep. Stand-alone/non-ganged 2 & 3 drawer cabinets require counterweight, refer to page 15.

Replacement Keys and Barrels

KI has appointed Webshield as a mobile locksmith and replacement key and lock core service. Webshield hold a stock of key blanks and will cut and supply replacement keys for the most commonly used P numbers within 24 hours. Replacement lock cores and pairs of keys are also available. Keys will only be supplied on receipt of an official order, which must also show the End User and contact name. Master and extractor keys are available for named End User orders. Please call the KI Sales Department.

Additional folding keys are available at extra cost for each cabinet. Please specify at the time of order with the code number F KEY 1.

Low Iron, Colour Coat Glass Top.

Low Iron, Etched Glass Top.

KI 800 Series Files & Storage

Filing and storage cabinets are constructed from 0.7mm to 1.5mm cold rolled steel, which on average is 67% recycled steel content. Steel is treated to ensure the bonding of the 2 stage paint process, which provides a stain and scratch resistance surface.

Recycled Content
Numbers effective on 01/01/2009

Material	Recycled Content %	% Post Consumer	% Post Industrial	Can Be Recycled Y/N
Cardboard Packaging	100%	85%	15%	Y
Pallets	100%	90%	10%	Y
Steel	67%	65%	2%	Y

Finishes

Powdercoating process lines use water-based cleaning systems prior to powder painting to clean parts as opposed to solvent-based cleaning systems. Powder coatings are baked onto the metal components using natural gas fired ovens. Powder coatings contain negligible VOC and Hazardous Air Pollutant (HAP) contents. Add-on pollution control equipment is not necessary given the very low levels of pollutants.

ISO14001/EMAS management processes.

KI is continually exploring viable product designs and solutions that will aid in the achievement of those principles upheld by the Leadership in Energy and Environmental Design (LEEDTM), a priority programme of the USGBC (U.S. Green Building Council).

In 2003, KI became a corporate member of the USGBC and a corporate sponsor of the launch of LEED's CI Rating System in 2005. Representing the furniture manufacturing industry, KI works in co-operation with environmental professionals and their projects to examine how the company's product offerings embrace such critical areas as Energy Efficiency, Human and Environmental Health, Durability, Performance & Maintenance, Embodied Energy and Pollution, Resource Limitation and Waste Management.

Please refer to KI's environmental brochures for further details.

Toughened or Tempered glass is 5 times stronger than normal annealed (float) glass, however when damaged the panel will shatter into small pieces known as fragments.

Handling of Toughened Glass
• Carry one panel at a time
• Never place the glass down onto rough surfaces.
• Wear suitable hand protection

Storage of Toughened Glass
• You should always avoid glass to glass or glass to metal contact. A suitable protection should be used
• Glass should be stored upright on the edge, never flat on top of each other
• Protection should be sought from any inclement weather
• Glass should be covered whilst on site to avoid damage from other works.

THE MOST VULNERABLE PART OF ANY TOUGHENED GLASS IS THE EDGE. IF THE PANEL IS KNOCKED OR DAMAGED ON THE EDGE THE PANEL WILL BREAK INTO SMALL PIECES.

GLASS SHOULD NEVER BE USED IF ANY OF THE EDGES HAVE BEEN DAMAGED AS THIS WILL CREATE A WEAKNESS AND COULD CAUSE THE PANEL TO SPONTANEOUSLY BREAK.

STORAGE
800 SERIES

About KI

KI's furniture helps the world's leading organisations create happy, healthy, high performing working and learning environments. Bringing together good design, advanced engineering and sustainable resources, KI's products are durable, flexible and offer excellent value.

Founded in 1941, KI has grown to become one of the world's largest, most respected furniture manufacturing groups. KI's EMEA headquarters and showroom in Central London is supported by an established network of manufacturing facilities and distribution partners across the UK, Europe and the Middle East.
